PANQUAKE Surprises Fans with Early Release, Tracker-Free, Link Sharing App Pnqk.me

The Panquake team have just launched a ground breaking tool, slated to change the way we all share links. Set to disrupt Big Tech tracking of internet users, Panquake Me resets the status quo to give users back their privacy.

The visionary team at Panquake have just helped change the balance of power between internet users, marketers and spies by releasing Pnqk.me - a link shortening service with a difference.

Panquake Me solves three problems in one fell swoop by converting cumbersome, long links to a much simpler, shorter link, while simultaneously scrubbing the link of nasty trackers *and* archiving the original source content using web archive services.

Panquake Founder and Chief Product Officer, Suzie Dawson said:

"For too long journalists, activists and the general public have had to fear the links they share. Never knowing what was really hidden inside the link or whether the content would still be accessible in the future.

Recognising the urgency, we sliced off a piece of the cake of our Panquake technology to bring forward an early release of the application, in the solution that is Pnqk.me - a simple, free, link sharing and archiving tool in one, that's safe for you to use. This is a big win for internet users the world over, reducing the fear of digital profiling from big corporates and governments who map your networks of who you share content to."

Mainstream internet users are increasingly becoming aware of the sophisticated methods of data collection exercised against them. Many users are rightly wary about clicking on links - which often contain code that ties people sharing content with those clicking on it, and then tracks them around the internet, reporting their private data back to corporations or governments.

By using Panquake Me to generate short, clean, safer links, users can better protect themselves, their audiences, their family and friends from unwanted intrusions upon their privacy. While also ensuring their link will remain valid over time - with the archiving service ensuring no more dud links to content that doesn't exist anymore.

Panquake Chief Technology Officer, Sean O'Brien said:

"We don't record identifiers about you or anyone who clicks on Pnqk.me links. When you provide Panquake Me with a link, we save the scrubbed URL and a time-stamp. All of our source code is Free and Open Source Software (FOSS) so security researchers and the public can verify this.

Other link shortening services may actually track your activity or the activity of those who you share links with. Pnqk.me does not. I am proud to be a part of Panquake's innovative, international team delivering ethical solutions that protect users."

Panquake Me is free for use by the public and an enterprise version is planned for later release.

BACKGROUND ON Panquake:

To date, over 3 million people have visited the Panquake.com website and over 3,800 donors have contributed funds towards the development of the next generation social media technology.

Since Panquake first discussed a groundbreaking idea of a crowd-funded social media application where the users are the customers

– not the product – Panquake's build has achieved a series of major milestones, from network design proof of concept to a fully-functioning application interface.

Members of the public have flocked to [apply to become Panquake BETA users](#) and Panquake is in its final build phase in order to launch the BETA offering.

Visitors to [Panquake.com](#) are

a) joining a community dedicated to the delivery of a product which will bring next generation solutions to a market that is hungry for change

b) successfully crowdfunding to contribute to the product development at https://Panquake.com/donate and

c) spreading the word that things can and will be different.

With Big Tech algorithms, AI moderation and massive data breaches rendering outdated, monopoly platforms obsolete, **Panquake offers a vital and timely solution.**
