Just In Time: AI-free Social Network Panquake Onboarding Now

The growing cacophony of Internet users frustrated by the AI bot apocalypse are soon to find respite in privacy-respecting social network [Panquake](#)

Imagine: a modern, easy to use social network without bots, paid advertising, data mining, user profiling, or AI slop.

It sounds like a dream but for Panquake users it is a reality.

The superheroes who pushed people-powered social network project Panquake forward through thick and thin [have today announced](#) they are onboarding the first public users onto the anti-surveillance, pro-human rights platform.

Backed by a [viral crowdfunding campaign](#) launched by information activists, journalists and technologists, Panquake is living proof that social media can and will be different.

Panquake founder Suzie Dawson said: "The ability of citizens to communicate with each other on social media has been systematically undermined by corporate agendas. Users have had enough. People are sick of being exploited and are abandoning legacy platforms in droves. Big Tech is sinking under the weight of their paid advertiser models, AI integrations, manipulative content algorithms and disregard for the digital rights of their users. It is into this morass that our people-powered social media platform Panquake is arriving just in time, with a lifeboat for internet users worldwide who want a clean conversational space that they control, where their data is theirs and where they interact with real humans - not robots."

Panquake is a subscriber-based network funded by small payments from its own community instead of by advertisers or corporations. In return, Panquake does not profile or data-mine its users. Indeed, no personal user data is collected, stored or sold by Panquake. User

account data is stored on the user's own device in an encrypted data store and payments are made via third party payment providers without any Personally Identifiable Information (PII) being ingested into the Panquake app at any time.

As well as not storing payment information, Panquake does not require email addresses, phone numbers or identification documents from users either. This protects users in the event of any hack, leak or data breach.

Chief Commercial Officer Rene de Wit said: "What the platform doesn't have, can't be stolen. Panquake offers a unique proposition: a public communications platform where your content can be seen and interacted with widely by real people, while providing the ultimate protection for your personal information - by simply never collecting it in the first place. This answers an urgent market need at a pivotal moment."

A definitive guide to the onboarding of Panquake users has been published today [at the Talk Liberation Substack page](#), with comprehensive details about who will be first to use the platform, how and why this is such a significant moment for the future of social media.

BACKGROUND ON Talk Liberation:

'This is about people, not machines.' So begins the About Us page of Talk Liberation's [official website](#). Talk Liberation is a next generation software development house driven by the ethos that we all have a right to retain our privacy and control over our own data.

Talk Liberation started out as a group of volunteers and IT nerds frustrated at how Big Tech was abusing our data and using social media to turn us from customers into commodities. The company now has scores of talented team members working in more than a dozen countries on a variety of software projects at various stages of design, development, testing and delivery.

The launch of Panquake Lite caps off a huge couple of years for Talk Liberation, whose first release was [Panquake Me](#), a FREE link shortening service that cleans links and archives the original source

content all in one easy step. Other link shortening services can be used to track user activity and the activity of those they share links with. By contrast, Panquake Me protects users and their networks.

In May last year, Talk Liberation announced that viral social media project Panquake was on an Alpha Test Net. Only four short months later, the project [progressed to the next phase](#), dubbed '*Panquake Lite*'. The platform has been in daily use since and is quickly moving forward towards its public Beta release.

At the end of 2025, Talk Liberation released [Lnqk.Me](#), a privacy-respecting short link and QR code generation service built into a collaborative digital marketing dashboard for commercial use.
